

4 Skyscrapers EO (18)

Place a number from one to five (four in the example) in each cell such that every row and column contains each number exactly once. The numbers represent skyscrapers of the respective height. Taller skyscrapers block the view of lower skyscrapers behind them. Numbers outside the grid indicate how many skyscrapers are visible from that point in the corresponding row or column. Every even numbered clue has been replaced by the letter E and ever odd numbered clue by the letter O.
